

## CENTRALIZED CONTROL

FOR ALL XX-SERIES AND X2-SERIES NETWORK PACKET BROKERS

Profitap Supervisor is a centralized management system that allows you to organize and control all XX-Series and X2-Series Network Packet Brokers deployed inside your network architecture. It provides a comprehensive overview of the connected monitoring fabric and brings this together into a single interface. Instead of maintaining each device separately, Supervisor helps orchestrate clusters of devices all at once.

By enabling the creation of network-wide traffic forwarding rules, and by automating maintenance processes, Profitap Supervisor simplifies the workflow of managing your network monitoring infrastructure, saving you valuable time and money.

## FEATURES

- ▶ At a glance supervision of all connected devices
- ▶ Centralized deployment of firmware updates
- ▶ Simplified tool orchestration workflow
- ▶ Organization of devices and statistics in clusters
- ▶ Traffic forwarding rules across the entire fleet of connected devices
- ▶ TACACS+ & RADIUS authentication
- ▶ Syslog GUI
- ▶ Advanced authentication configuration
- ▶ Import/Export of Supervisor configuration

## ORDERING INFORMATION

ORDER REFERENCE	DESCRIPTION
<b>SFM-10</b>	Supervisor Fabric Manager, 10 Nodes
<b>SFM-25</b>	Supervisor Fabric Manager, 25 Nodes
<b>SFM-50</b>	Supervisor Fabric Manager, 50 Nodes
<b>SFM-100</b>	Supervisor Fabric Manager, 100 Nodes
<b>SFM-250</b>	Supervisor Fabric Manager, 250 Nodes
<b>SFM-500</b>	Supervisor Fabric Manager, 500 Nodes
