

PROVIDES THE DATA THAT COUNTS FOR NETWORK MONITORING

AGGREGATION, REPLICATION, ADVANCED FILTERING, LOAD BALANCING

The Profitap XX-12800G is a high-density Network Packet Broker, bringing you the power and flexibility of network traffic management with a total throughput of 12.8 Tbps in a single 19" rack unit.

With 32 QSFP-DD ports (40/100/400 Gbps), the XX-12800G allows for aggregation, replication, filtering and load balancing in very high bandwidth port monitoring and analysis scenarios.

KEY FEATURES

AGGREGATION

Aggregate traffic coming from multiple incoming links

REPLICATION

Replicate traffic to multiple monitoring and security tools

FILTERING

Only send actionable data to each of the connected tools

LOAD BALANCING

Balance traffic over multiple monitoring and security tools

USE CASES

- Palance traffic over multiple monitoring and security tools: allows incoming traffic to be distributed evenly and dynamically across multiple output ports.
- Aggregate multiple traffic streams into higher speed links.
- Replicate traffic to multiple monitoring and security tools: outputs copies of incoming traffic to multiple output ports.
- Filter specific parts of the traffic based on a wide array of allow and drop rules to ensure the appropriate traffic is sent to the appropriate tools.
